

Hello!

Concerns around cleanliness and COVID-19 can be unsettling. The good news: Mamava pods were intentionally designed to be easy to clean.

Here's what you should know:

Interior pod surfaces are made of the same easy-to-sanitize materials used in medical and food-prep settings.

Mamava lactation pods are well ventilated, with fans capable of at least 35 ACH (Air Changes per Hour).

The facility is responsible for cleaning and disinfecting this space regularly, but please do your part to make sure it's ready for the next person.

1) Please wipe up any spills.

2) If you have a sanitizing wipe, give the shelves and benches a swipe when you arrive and when you are done.

If you have any questions or concerns, please contact:
